

Flower buckets

For flowers we can supply buckets, this for storing them on water, but also for transport. One of the big advantages of this model of bucket is that it is made in such a way that it is not tipping over easily, also the part containing the water is not on the floor and in this way it cannot start leaking due to wear on the bottom side.

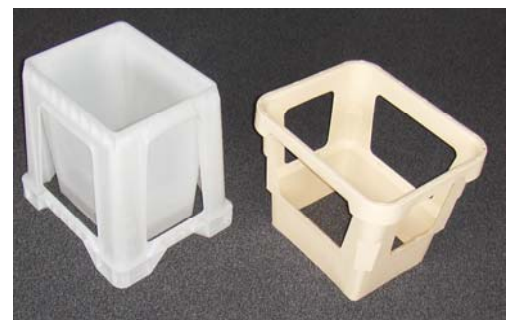

The buckets are available in different sizes, on the picture next to this you can see the “midi” and “mini” model.

The “mini” has the size 296 x 246 x 312 mm

The “midi” has the size 400 x 330 x 340 mm

Both models can be supplied with an additional top frame, this additional frame is good to be used for higher flowers. The pictures below will give you some more idea of the buckets with top frames in practical use.

This model of buckets are also used on the Dutch Flower Auction.

Feel free to contact us for more information, on buckets, trolleys or other items you might need for your flowers
